

Togiak STEM Night

4/8/24

STEM Kits

S.T.E.M night was a hit for the families that joined us. Each student got a STEM kit to look through and put together the item of their choice. There were 2 different kits, which varied on difficulty level. One kit was simpler and had 4 items; while the second kit was more advanced and had 6 items.

The families that joined us, enjoyed putting the items together with their children. This was the idea behind the kits. It was something all ages would enjoy and would allow families to work together in the process. We enjoyed laughs when pieces wouldn't stay together AND when Ms. Gore had the glue explode all over her! Families worked with other families, when one robot worked and someone else needed assistance with theirs.

After Family Night

Each student that came to family night, received their own box to keep. Students that were not at family night received a kit to take home after family night was over. Each family received an extra item to take home, depending upon the ages of the children. Younger students got to take home a Sea Monkey tank to watch their new pets hatch and swim around. Older students got crystals to take home and grow. Family night was a success both during and afterwards!
