

# Earth Day In KMO

## Manokotak Family Night Learning Kits

### Grow & Glow

In this first activity the students and their families had the opportunity to build a glow in the dark terrarium. They can watch the roots grow and the grass sprout day and night. This Science project was engaging and hands-on for the whole family.

### Chime In

This birdhouse wind chime building kit incorporates engineering and art all in one. This kit invited families to build a home for community birds while enjoying the musical wind chimes accompanying it.

## STEAM Night

As COVID-19 continues to impact our daily educational pursuits, we continued with at home family night kits. In this earth day themed STEAM package, families will find science activities, building crafts, and a delicious dirty dessert that they can enjoy in the comfort of their own home. This migrant education family night combines science, engineering, art, and music to celebrate earth day!

### Play in the Dirt

To celebrate earth day we included a mini gardening set that featured 6 mini potted plants and paint to decorate the identification signs.

The Jello DIRT dessert is a tasty treat that mimics the concepts explored within the family night activities.
