Manokotak Family Night Learning Kits

Let It Snow!

In this first activity the students and their families had the opportunity to make artificial snow. This STEM project was engaging and hands-on for the whole family.

Brain Freeze

This ice cream making science lab kit took interactive to a whole new level! This incorporated multiple senses including taste, touch, and sight. The kit invited families to explore measurement and flavor in a fun new way.

Into the Unknown!

We have receive heaps of snow this winter... but just how much snow *did* we get?!

With this cute and unique craft students were able to build their own measuring tool to determine just how much snow is right outside their front door.

Family Literacy Night

We have had to make some changes this last year due to the pandemic. As we are unable to host Migrant Education Family Night at the school this year, we are sending it home! In the family night package, families will find activities, crafts, a book, and a pizza that they can enjoy together as a family in the comfort and safety of their own home. This migrant education family night combines literacy, science, math, and art to learn all about winter!
