

# MIGRANT EDUCATION NIGHT

ALEKNAGIK NORTH SHORE SCHOOL/APRIL 10, 2019

## Literacy Night

Our April Migrant Education night began with students making their own pizzas with various toppings that included pepperoni, pineapple, bacon, cheese, olives, onions, and peppers. While the pizzas baked in the oven, students had the task of making a model of either a plant cell or animal cell out of various types of candy. Prizes were awarded for first, second, and third places. After students and their parents ate their pizzas and salads, they made delicious ice cream in ziplock bags by using rock salt. When their ice-cream became frozen, they added several toppings including various candy, berries and whip cream.

## Edible Models of Cells

Students formed teams to create edible models of plant and animal cells using various types of candy. These are our first, second, and third place winning cell models.

## Making Ice Cream

Learning that the secret to making ice cream is to lower the freezing point of ice so it can freeze the ice cream.
